Professional Summary

Junior AI Engineer with hands-on experience building a PDF question-answering RAG API using Python, FastAPI, LangChain, FAISS, and HuggingFace (all-MiniLM-L6-v2, flan-t5-small). Frontend owner in a team of 4 for a serverless departmental voting system on AWS used by 500+ students. Seeking a Junior AI / GenAI Engineer role focused on LLM applications and retrieval systems.

Technical Skills

Programming: Python

AI / GenAI: LangChain (PyPDFLoader, RecursiveCharacterTextSplitter), RAG, Prompt Templating, HuggingFace Transformers

Models: google/flan-t5-small (text2text, 512 max tokens), sentence-transformers/all-MiniLM-L6-v2

Vector DB: FAISS (top-k 3 retrieval)

Backend: FastAPI (REST, /upload, /ask), Pydantic, Uvicorn, CORS

Cloud: AWS Lambda, API Gateway, DynamoDB, S3, Cognito, CloudFront (console setup)

Frontend: HTML, CSS, JavaScript, voting-flow UI design

Tools: Git, GitHub

Projects

RAG Chatbot - Solo build

Mar 2026 - May 2026

Python, FastAPI, LangChain, FAISS, HuggingFace | github.com/Mohak-talodhikar/RAG-ChatBot

- Built PDF question-answering API with FastAPI exposing /upload and /ask endpoints, chaining FAISS retriever, prompt template, and google/flan-t5-small through LangChain for grounded responses.
- Processed uploads with PyPDFLoader and RecursiveCharacterTextSplitter at 1000-character chunks with 200-character overlap, embedded with sentence-transformers/all-MiniLM-L6-v2 and stored in FAISS with top-k 3 retrieval.
- Shipped local-only HuggingFace text2text pipeline using flan-t5-small with 512 max new tokens, adding PDF validation, temp-file cleanup, CORS setup, and deduplication of repeated sentences in answers.

Serverless Voting System - Team of 4, owned frontend design

Feb 2025 - Jun 2025

Frontend design, AWS console (Lambda, API Gateway, DynamoDB, Cognito) | github.com/Mohak-talodhikar/Online-voting-system

- Owned frontend design for team of 4 covering login, candidate selection, confirmation, and results display; ran locally and deployed for departmental voting used by 500+ students.
- Supported team backend setup through AWS console clicks wiring Lambda, API Gateway, DynamoDB storage, and Cognito authentication for live voting.
- Applied one-vote-per-student validation with team during live departmental election to protect vote integrity.

Education

B.Tech (CSE) - 7.07 CGPA

Oct 2022 - Jul 2026

Rajiv Gandhi College of Engineering, Research and Technology, Chandrapur

Training and Courses

- Datacom - AI in the Workplace Job Simulation (Forage, Feb 2026)
- Career Essentials in GitHub Professional Certificate (LinkedIn Learning)
- Introduction to Prompt Engineering for Generative AI (LinkedIn Learning)
- Generative AI Fundamentals (LinkedIn Learning)
- C/C++ and Java Programming coursework
